

Morecambe Bay

Lancashire's Living Seas Wildlife Trail

Discover the Trail

Welcome to the Lancashire's Living Seas Wildlife Trail!

Along this trail discover the wealth of amazing wildlife that calls this stretch of coastline and the Irish Sea it's home. The seas off the coast of Lancashire are teeming with life! They are wholeheartedly 'living' with so many secrets waiting to be discovered.

So let's go and discover them...

What can you find here?

Everywhere you look wildlife is thriving, from the depths of the Irish Sea to the Wyre Estuary's nutrient-rich muddy shores & busy skies!

Looking out to the Irish sea there's a whole underwater world beneath the waves that's home to our ocean giants including grey seals, harbour porpoises, basking sharks and even leatherback turtles come the summer months.

Look out for whelk and shark eggcases or delicate sea potato (urchin) shells. The strandline tells us a story about life in the Irish Sea.

Rossall Point is the southern-most point in Morecambe Bay before it joins the wider Irish Sea, making it an important area for breeding and overwintering wading birds to roost and feed.

KEY

-  Carved monolith
-  Species disc
-  Storytelling area
-  Car Park
-  Information board
